

SENIOR BACKEND / SOFTWARE ENGINEER
Python/FastAPI | Linux | Docker | Security-Focused Backend Engineering & Operations

PROFESSIONAL SUMMARY

Senior backend/software engineer and technical leader with 7+ years of experience across API development, Linux-based service operation, cloud/platform modernization, database systems, production troubleshooting, and security remediation. Hands-on experience includes Python/FastAPI REST services, Ubuntu/Linux administration, Docker and Docker Compose, Nginx reverse proxy and TLS, Redis, Celery background workers, Elasticsearch, authentication and secrets handling, SQL optimization, Kafka, Kubernetes, Azure, and AWS. Experienced in secure API design, vulnerability remediation, deployment, observability, incident troubleshooting, technical documentation, and direct customer communication in production environments.

CORE COMPETENCIES

Backend & APIs

Python, FastAPI, REST API design, backend gateways, API integrations, parsers/enrichers, asynchronous processing

Linux & Containers

Ubuntu/Linux CLI, Docker, Docker Compose, container health, service troubleshooting, resource tuning

Security & Edge

Nginx reverse proxy, TLS, authentication, tokens, environment-based secrets, least privilege, input validation

Async & Search

Redis, Celery workers, Elasticsearch, Kafka, background jobs, retries, queue-based processing

Data Platforms

MariaDB/MySQL, PostgreSQL, SQL Server, Oracle SQL, procedures/functions, query optimization

Cloud & Delivery

Azure, AWS, Kubernetes, CI/CD concepts, production deployment, migration support, monitoring and troubleshooting

Languages & Frameworks

Python, FastAPI, .NET Core, .NET Framework, C#, Go, Vue.js, SolidJS

Leadership & Operations

Technical leadership, code review, mentoring, documentation, incident troubleshooting, stakeholder communication

PROFESSIONAL EXPERIENCE

NTQ SOLUTION

May 2023 – Jun 2026

Software Engineer & Technical Leader

- Research and remediate security vulnerabilities in insurance systems using findings from KPMG, Veracode, and Synopsys reports.
- Migrate legacy ASP.NET web systems to Azure and take responsibility for deployment and issue resolution during migration.
- Troubleshoot and maintain existing production systems, resolving complex functional and non-functional issues.
- Upgrade legacy applications to newer platform versions to improve performance, maintainability, and security posture.
- Analyze system challenges and propose technical architectures and implementation solutions.
- Produce diagrams and technical documentation, review code, mentor developers, and communicate directly with customers in daily technical meetings.

Technology: .NET Core, .NET Framework, Python/FastAPI, Linux/Ubuntu, Docker, Nginx, Security, Kafka, SQL Server, Azure

THIRSTY OASIS - US STARTUP

Dec 2022 - May 2023

Software Engineer & Project Manager

- Lead software delivery, team development, technical problem-solving, and project execution for a startup environment.
- Manage project timelines, resources, scope, and communication with stakeholders while maintaining product quality.
- Drive product development and enhancement, addressing technical and operational issues that affect delivery and reliability.
- Support engineering decisions across backend services, data systems, messaging, and container orchestration.

Technology: Go, Python/FastAPI, Linux, Docker/Docker Compose, Redis, Celery, Elasticsearch, MySQL, Kafka, Kubernetes

SAFIN JSC

Feb 2022 - Dec 2022

Software Engineer

- Worked through the full API lifecycle: requirements capture, design, development, testing, and deployment.
- Created database procedures and functions and optimized existing SQL queries for performance.
- Analyzed and designed authentication flows and implemented them through the backend gateway.
- Handled transaction requests from an internal administration portal and improved backend processing reliability.

- Designed and optimized pricing mechanisms for efficiency and dependable operation.

Technology: .NET Core, Vue.js, Oracle SQL, Keycloak, AWS

MISA JSC

Jan 2019 - Feb 2022

Software Engineer

- Designed, coded, tested, debugged, and maintained product systems across frontend and backend components.
- Developed and optimized internal desktop tools and workers for database conversion and database synchronization.
- Diagnosed and resolved application defects and contributed to software design and technical documentation.
- Mentored engineers and contributed development estimates and implementation input to project timelines.

Technology: .NET Core, Vue.js, PostgreSQL, SQL Server, Stimulsoft, WPF

ADDITIONAL BACKEND & PLATFORM EXPERIENCE

- Build and maintain Python/FastAPI REST APIs with request validation, structured error handling, authentication, and secure configuration.
- Operate self-hosted services on Ubuntu/Linux using the CLI; troubleshoot processes, networking, permissions, logs, disk/memory pressure, and service health.
- Package and deploy multi-service applications with Docker and Docker Compose; manage environment variables, volumes, networks, health checks, and restart policies.
- Configure Nginx as a reverse proxy for API services, including TLS termination, routing, security headers, and upstream service configuration.
- Use Redis and Celery for asynchronous/background processing, retries, task queues, and worker-oriented workloads.
- Work with Elasticsearch for indexing, search, and API-driven data retrieval; integrate search services into backend workflows.
- Apply secure secret and credential handling using environment-based configuration, API tokens, TLS certificates, restricted permissions, and least-privilege practices.
- Monitor and troubleshoot production services through application/container logs, health checks, worker status, resource utilization, and database/search performance.

EDUCATION & CERTIFICATIONS

Bachelor of Software Engineering - Hanoi University of Industry | 2016 - 2020 | Degree classification: Good

Certifications: Responsive Web Design; JavaScript Algorithms and Data Structures; Front End Libraries - FreeCodeCamp (2018)
